Project Title	PocketSmart AI - Intelligent Budget Planning & Recommendations
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) report

The proposal report aims to provide practical and personalized budget planning using artificial intelligence, improving planning efficiency and decision-making. It addresses the difficulty of distributing a limited budget across multiple requirements. Key features include AI-based budget planning, category-wise allocation, and recommendation generation.

Project Overview	
Objective	The primary objective is to provide users with an intelligent and practical way to create personalized budget plans and recommendations for home setup, parties, and jewelry selection.
Scope	The project covers Home Planner, Party Planner, and Jewelry Planner, with budget allocation, recommendations, product catalog support, and recommendation history.
Problem Statement	
Description	Users often need to divide a limited budget across several categories while finding suitable options. Manual comparison and planning can be time-consuming and may lead to poor budget distribution.
Impact	Solving these issues can simplify planning, improve budget awareness, reduce unnecessary spending, and provide a more organized recommendation experience.
Proposed Solution	
Approach	Employing AI-assisted planning and rule-based fallback techniques to analyze user requirements, allocate budgets, and generate practical recommendations for different planning scenarios.
Key Features	- Home, party, and jewelry budget planners. - AI-generated budget allocation and recommendations. - Fallback planning when AI generation is unavailable.

	- Budget-aware recommendations using Indian Rupees (INR). - Product catalog suggestions with price, rating, discount, and platform fields. - User authentication and recommendation history. - Exact live price and availability are not treated as verified.

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	Processing resources for running the application and AI-assisted workflows	Development machine / CPU-GPU capable system
Memory	RAM specifications	8 GB or above
Storage	Disk space for application, database, models and logs	SSD storage
Software		
Frameworks	Python frameworks	FastAPI, Jinja2
Libraries	Application and AI libraries	google-genai, pydantic, sqlite/database utilities, JSON and standard Python libraries
Development Environment	IDE / development tools	VS Code / PyCharm, Python environment
Data		
Data	Source, size, format	PocketSmart AI product catalog and user-provided planning inputs; JSON / database records
