Project Name	Pocketsmart AI
Maximum Marks	5 Marks

Code-Layout, Readability and Reusability: This document evaluates the quality of the provided codebase in terms of its structure, readability, and reusability. The assessment is based on the uploaded source code.

Code Layout Checklist

S.No	Code Quality Parameter	Description	Followed (Yes / No / Partial)	Remarks
1	Consistent Indentation	Uniform spacing/ tabs used throughout the code	Yes	Code uses consistent indentation and structured blocks.
2	Proper File Structure	Files and folders are logically organized	Yes	The code is separated into models, routers, services, security, database and catalog responsibilities.
3	Meaningful Variable Names	Variables reflect their purpose clearly	Yes	Names such as budget, guests, event_type, outfit_description and recommendations are descriptive.
4	Function / Method Names	Functions are descriptively named	Yes	Functions such as register_user, authenticate, search_catalog, generate_home and generate_jewelry clearly indicate their purpose.
5	Code Comments	Inline and block comments explain code logic	Partial	Section comments are present, but the

6	Modular Design	Code is split into reusable functions/modules	Yes	supplied source contains limited explanatory comments for individual logic blocks.
8	Error Handling	Exceptions and errors are handled gracefully	Yes	HTTP exceptions, validation checks and fallback handling are implemented.

Reusable Components / Modules

S.No	Component / Module Name	Language / Technology	Where Reused	Reusability Level (High / Medium / Low)
1	Request Schemas	Python / Pydantic	Home, Party, Jewelry, Login and Recommendation Details requests	High
2	Authentication Service	Python / FastAPI / SQLite	Registration, login, session handling and bearer authentication	High
3	Catalog Search	Python	Home, party and jewelry recommendation flows	High
4	Fallback Services	Python	Home, party and jewelry planners when AI generation is unavailable	High
5	Gemini Utility	Python / Google GenAI	Home, party and jewelry AI generation	High
6	API Routers	Python / FastAPI	User APIs, planner APIs, history and recommendation details	Medium

Overall Code Quality Assessment

Aspect	Rating (1-5)	Comments
Code Layout & Structure	4	The code is logically divided into API, model, authentication, catalog, fallback and AI-generation responsibilities.
Readability	4	Naming is generally clear and the code follows a structured style, though some repeated sections reduce clarity.
Reusability	4	Several functions and modules are reused across planner types, especially catalog search, authentication and fallback services.
Documentation / Comments	3	Section headings are useful, but more detailed comments and module documentation would improve maintainability.
Overall Score	4 / 5	Good overall organization and modularity, with opportunities to reduce duplication and improve explanatory documentation.
