

Coding & Solution

Date	15 March 2026
Team ID	6aba2e98ca93a2750963fe65
Project Name	PocketSmart AI: Your Smart Budget & Recommendation Assistant
Maximum Marks	5 Marks

Coding & Solution

This section evaluates the quality and completeness of your implemented code and the overall solution. Your submission should demonstrate working functionality, clean code practices, and alignment with your defined requirements.

Instructions:

1. Ensure your code is well-structured, commented, and follows best practices for your chosen technology stack.
2. The solution should address the core problem statement and implement the key functional requirements.
3. Include all source files, configuration files, and setup instructions needed to run the application.
4. Attach or link to your code repository (e.g., GitHub) in the table below.

Solution Summary

Field	Details
Repository Link / URL	Not provided
Programming Language(s)	Python, HTML, CSS, JavaScript
Framework(s) Used	FastAPI, Jinja2
Key Features Implemented	User registration/login; Home Interior Budget Planner; Party Budget Planner; Jewelry Budget Planner; Gemini AI recommendations; outfit image upload; recommendation history; budget allocation; fallback recommendations.
Pending / Incomplete Features	Live product API/stock integration; real-time price verification; public cloud deployment and hosted repository link.
Setup / Run Instructions	1. Install Python and dependencies. 2. Open the project in VS Code. 3. Configure the Gemini API key. 4. Run the FastAPI app with Uvicorn. 5. Open the local URL in a browser. 6. Register/login and use the planners.

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	No
6	Code is committed to a version control repository	No

Additional Notes / Comments:

PocketSmart AI is implemented as a budget-aware personal AI assistant using FastAPI, Jinja2 and Gemini-based recommendation logic. It supports authentication, Home/Party/Jewelry planning, recommendation history, catalog-based suggestions and fallback handling. A public repository link and deployment details were not provided.
